mark-angel.xyz · github.com/ExiviuZ · linkedin

Frontend developer with 2+ years shipping accessible, production Vue.js/Nuxt.js interfaces for real estate, insurance, retail, and government clients — eight projects delivered, two under ongoing maintenance. Promoted from Junior Frontend to Mid Web Developer on delivery record. Integrate REST APIs against CMS platforms and third-party systems, and work into the Laravel backend and server setup when a project needs it.

## EXPERIENCE

### Mid Web Developer

2024 — Present

Designblue Manila — Makati, Philippines · *previously Junior Frontend Developer*

- One of three mid-level developers on a four-person frontend team; own features end to end across two live projects at once, paired with a backend engineer, and contribute to architecture and component design decisions.
- Built and maintained frontend interfaces for client projects across real estate, insurance, retail, and government sectors using Vue.js, Nuxt.js, and Tailwind CSS.
- Owned the Etiqa KYC and policy-purchasing integration, working through third-party API inconsistencies to keep a multi-step purchase flow reliable.
- Raised Lighthouse performance scores from roughly 80 to 90 on client builds, cutting page load times and QA tickets.
- Wrote Laravel endpoints and built the CMS side of client projects; deployed and configured Nginx and PM2 on AWS VPS instances.
- Delivered a pixel-perfect static microsite for the Asian Development Bank using Nuxt static generation.

## SELECTED PROJECTS

**Etiqa Insurance PH — site & online shop portal** in development
CMS-driven products and FAQs over REST, plus a storefront for browsing and buying policies wired to Etiqa's own KYC verification and policy-issuance APIs.

**ADB Information Platform**
Static microsite for the Asian Development Bank on fragile and conflict-affected states — pixel-perfect build on Nuxt static generation.

**Suntrust Properties · Inlife Benefits · Robinsons Department Store**
Client frontends for a national real estate brand, a benefits platform and a retail chain — reusable Vue components consuming CMS-managed content over REST, responsive across every page type.

**Brikk Inventory System** internal
Data-heavy inventory management frontend for stock, orders and records, updating over REST in real time.

## SKILLS

**Frontend**
Vue.js, Nuxt.js, JavaScript, TypeScript, HTML5, CSS3, Tailwind CSS

**Backend**
Laravel, PHP, MySQL, REST APIs

**Infrastructure**
AWS (Lightsail/VPS), Nginx, PM2, Git, GitHub

**AI-assisted dev**
Claude Code, Gemini CLI, Codex

## CERTIFICATIONS

Responsive Web Design · freeCodeCamp

JavaScript Data Structures & Algorithms · freeCodeCamp

Web Development Bootcamp · Udemy

## CURRENTLY LEARNING

Testing with Vitest & Vue Test Utils, CI/CD with GitHub Actions, React / Next.js

## EDUCATION

**BS Information Technology**
Polytechnic University of the Philippines
Dean's Lister & President's Lister
2019 — 2023
